

Recruitment App

Capstone Project Report

Submitted By: Patwari Abhishek

Under the Guidance of: Nadeem Sir

Abstract

The project demonstrates the complete Salesforce development lifecycle — from foundational configuration to automation, data modeling, and deployment — providing both practical and conceptual understanding for aspiring Salesforce professionals.

Throughout the playlist, viewers learn to create and configure Salesforce objects, establish user roles and permissions, and design data relationships that mirror real-world business operations. The project further explores automation tools such as Flows, Process Builder, and Validation Rules to streamline repetitive tasks and ensure data accuracy. Additionally, it highlights dashboard creation, report generation, and security settings to provide actionable insights and maintain robust data protection.

By blending both Salesforce Admin and Developer functionalities, the project bridges theory with hands-on application. It emphasizes the integration of automation, workflow logic, and dynamic interfaces to create a responsive and intelligent system tailored for real-world use cases. The playlist concludes with deployment best practices, performance review, and a demonstration of the live system in action.

Overall, this project serves as an educational and practical guide for understanding Salesforce's cloud ecosystem, showcasing how business challenges can be translated into scalable, automated solutions using Salesforce tools. It is an excellent resource for students, developers, and administrators aiming to build career-ready Salesforce applications.

Phase 1: Problem Understanding & Industry Analysis

Objective:

To understand the hiring challenges faced by organizations and explore how Salesforce can streamline the recruitment process through automation and cloud-based management.

Key Activities:

Conducted a survey of HR and recruitment processes in different organizations.

Identified pain points such as manual tracking, inconsistent communication, and lack of reporting.

Researched how companies use Salesforce CRM for talent acquisition

Defined project scope, user roles (HR Manager, Recruiter, Interviewer, Candidate), and core features.

Created requirement documentation and business flow diagrams.

Phase 2: Org Setup & Configuration

Objective:

To establish and configure a secure Salesforce environment suitable for development and testing.

Key Activities:

Created a Salesforce Developer Org.

Set up Profiles, Roles, and Permission Sets for HR Managers, Recruiters, and Interviewers.

Configured Company Information, Fiscal Year, and Locale Settings.

Enabled essential Salesforce features like Flow Builder, Reports & Dashboards, and App Builder.

Created a custom Lightning App named Recruitment Management App with navigation tabs for all objects.

Outcome:

A ready-to-develop org environment with access controls and configurations in place.

👉 Insert Salesforce Company Information screenshot here.

Get Salesforce Environment

❓ Created a free Developer Org:

developer.salesforce.com/signup

The image shows a browser window with the URL `salesforce.com/form/developer-signup/?d=pb`. The page is titled "Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud." and "Sign up for your Developer Edition." It lists several benefits of the Developer Edition, such as building apps fast with drag-and-drop tools, going further with Apex code, building AI agents with Agentforce, harmonizing data with Data Cloud, grounding Agentforce with structured and unstructured data, and integrating with anything using APIs. The sign-up form includes fields for First name, Last name, Job title, Work email, Company, and Country/Region (set to India). A checkbox for "I agree to the Main Services Agreement - Developer Services and Salesforce Program Amendment 1 and Knowledge, as described in the" is also present.

Below the sign-up form, the Salesforce Setup interface is visible. The "Setup" menu is open, showing "Users", "Permission Set Groups", "Permission Sets", "Custom Code", and "Custom Permissions". The "Permission Sets" section is selected, showing a list of permission sets. The list includes columns for Action, Permission Set Name, Description, and License. The list is filtered to show "All Permission Sets".

1-25 of 58 | 0 Selected | 4 Previous Next | Page 1 of 1

Phase 3: Data Modeling & Relationships

Objective:

To design the underlying data architecture using Salesforce objects and relationships to represent recruitment operations.

Objects Created:

1. Position - Job Title, Department, Location, Experience, Skills Required, Status.
2. Candidate - Name, Email, Contact Number, Skill Set, Experience Level, Resume Link.
3. Job Application - Application Date, Status, Candidate Reference, Position Reference.
4. Review - Interviewer, Rating, Comments, Recommendation.

Relationships Defined:

Position ↔ Job Application: Master-Detail (One Position can have multiple Applications)

Candidate ↔ Job Application: Lookup (One Candidate can apply for multiple Positions).

Job Application ↔ Review: Master-Detail (One Application can have multiple Reviews)

Key Activities:

Created custom fields, picklists, and validation rules.

Established object relationships to maintain relational integrity.

Created page layouts and record types for different users.

Outcome:

A scalable and normalized data model supporting all recruitment data and reporting needs

Phase 4: Process Automation

Objective:

To automate recruitment workflows and eliminate manual intervention using Salesforce automation tools.

Tools Used:

Flow Builder, Approval Processes, Email Alerts, Validation Rules

Automations Implemented:

1. Application Status Flow: Automatically updates the status when an interview is scheduled or completed.
2. Job Approval Process: Sends a job posting to HR Manager for approval before it becomes active.
3. Candidate Notification Flow: Sends confirmation email after an application is submitted.
4. Validation Rules: Prevents duplicate job applications for the same position.

Outcome:

Seamless automation of repetitive HR processes leading to time savings and consistent data handling.

Description

Enable page-level dynamic actions for the Salesforce mobile app

Phase 5: Apex Programming

Objective:

To extend system functionality where declarative tools are not sufficient

Key Activities

Developed Apex Triggers for:

Auto-calculating Candidate Score based on Skills, Experience, and Education fields.

Auto-updating Position Status to “Closed” when the required number of hires is reached.

Created Apex Classes to handle skill-based job matching and dynamic record updates.

Used SOQL queries for efficient data retrieval and manipulation.

Developed Test Classes ensuring above 75% code coverage for deployment.

Outcome:

Advanced, logic-driven automation for accurate and intelligent recruitment management.

👉 Insert Apex class & trigger screenshot here.

Phase 6: User Interface Development

Objective:

To design a clean, user-friendly interface that simplifies navigation and enhances user experience.

Key Activities:

Built Lightning Record Pages for all objects with relevant components and quick actions.

Designed Custom Tabs for Position, Candidate, Application, and Review.

Developed Lightning Web Components (LWCs) for:

Displaying candidate profiles with skill badges.

Showing application status dynamically.

Listing open positions with search and filter options.

Customized layouts for Recruiters and HR Managers

Outcome:

An interactive and responsive interface enabling efficient management of recruitment workflows.

👉 Insert LWC component screenshot here.

Phase 7: Integration & External Access

Objective:

To enable external connectivity for job posting and communication using Salesforce integration capabilities.

Key Activities:

Integrated mock REST API to simulate posting job positions to external portals.

Configured Email-to-Case to capture candidate emails within Salesforce records.

Created Connected App for external authentication and API access.

Optionally set up Experience Cloud Site to allow external recruiter access to limited data.

Outcome:

A connected and accessible recruitment platform capable of integrating with third-party systems securely.

👉 Insert Named Credential screenshot here.

The screenshot shows the Salesforce Setup interface for Remote Site Settings. The left sidebar contains navigation links for Setup, Home, Object Manager, Custom Code, Remote Access, Security, and Remote Site Settings. The main content area is titled 'Remote Site Settings' and displays a table of 'All Remote Sites'. The table has columns for Action, Remote Site Name, Namespace Prefix, Remote Site URL, Active, Created By, Created Date, Last Modified By, and Last Modified Date. A single entry is visible for 'ApexDevNet' with a URL of 'http://www.apexdevnet.com'. A 'New Remote Site' button is located at the top right of the table.

Action	Remote Site Name	Namespace Prefix	Remote Site URL	Active	Created By	Created Date	Last Modified By	Last Modified Date
Edit Del	ApexDevNet	-	http://www.apexdevnet.com	✓	ABHISHIK_PATWARI	17/10/2025, 12:51 pm	ABHISHIK_PATWARI	17/10/2025, 12:51 pm

<https://d000000ge9uac-dev-ed.develop.my.salesforce-setup.com/lightning/setup/SecurityRemotePriority/home>

Phase 8: Data Management & Deployment

Objective:

To load, manage, and deploy data and components to production-ready environments

Key Activities:

Used Data Import Wizard and Data Loader to insert sample candidate, position, and application records

Verified record relationships and lookup references.

Used Change Sets for moving components from sandbox to production.

Performed data validation and system testing post-deployment.

Outcome:

Clean and accurate data loaded, and the solution deployed successfully with minimal errors.

👉 Insert Data Loader screenshot here.

The screenshot displays the Salesforce Data Import Wizard interface. At the top, there is a navigation bar with a search box labeled "Search Setup" and tabs for "Setup", "Home", and "Object Manager". Below the navigation bar, a table lists columns: "Status", "Object", "Records Created", "Records Updated", "Records Failed", "Start Date", and "Processing Time (ms)". A "Bulk Api Monitoring" button is positioned below the table. A large light blue box contains a binoculars icon and the text "Before you import your data...". To the right of this box, there are three sections of advice: "Clean up your data import file", "Make sure your field names match Salesforce field names", and "Don't import too many records at once". Below these sections, the text "Import your data in 3 easy steps!" is followed by "Launch the Data Import Wizard to import your data.". A horizontal timeline shows four steps: "Pre-step: Prepare your data for import", "Choose data to import", "Edit field mapping", and "Review and start import". A "Launch Wizard!" button is located at the bottom of the timeline.

Phase 9: Reporting, Dashboards & Security Review

Objective:

To provide real-time hiring insights and ensure system security and compliance.

Reports Created:

Active Positions Report – Displays all open job postings.

Candidate Pipeline Report – Tracks applications by stage.

Recruitment Efficiency Report – Measures time-to-hire and performance by recruiter.

Dashboards Created:

Recruitment Summary Dashboard: Combines charts for open positions, candidate count, and status trends.

Security Review

Configured Profiles, Permission Sets, Field-Level Security, and Record Sharing Rules.

Verified user access and restricted sensitive candidate data.

Outcome:

Comprehensive analytics and a secure data management framework ensuring transparency and control.

Phase 10: Final Presentation & Demo Day

Objective:

To present the fully functional Recruitment Management Application to evaluators and stakeholders.

Key Activities:

Prepared a detailed PowerPoint presentation summarizing each phase.

Conducted a live demo covering:

Creating job positions

Submitting candidate applications

Automating approvals and notifications

Reviewing reports and dashboards

Collected feedback for improvements and documented future enhancement ideas.

Outcome:

Successful demonstration of a complete Salesforce-based Recruitment App showcasing both declarative and programmatic development.
